**Joint and tile cleaning  
with arvox Pro**

**arvox Pro Joints + Tiles is a unique product for the fast, efficient and eco-friendly cleaning of mineral joints and tiles.**

## PROBLEM

### Dirty tile joints make bathrooms look old

Tiled rooms such as bathrooms, showers and kitchens require increased demands on basic and maintenance cleaning due to their use and the associated moisture.

A wide range of cleaners is available for cleaning the tiles. Thorough cleaning of the joints is almost impossible with conventional cleaners.

As a result, despite regular cleaning, the bathrooms do not look clean and are not. Older, dirty joints can often only be „cleaned“ by a complete renovation, i.e. removal and re-grouting.

This results in considerable costs, often associated with sales losses due to unusable rooms and noise and dust pollution.

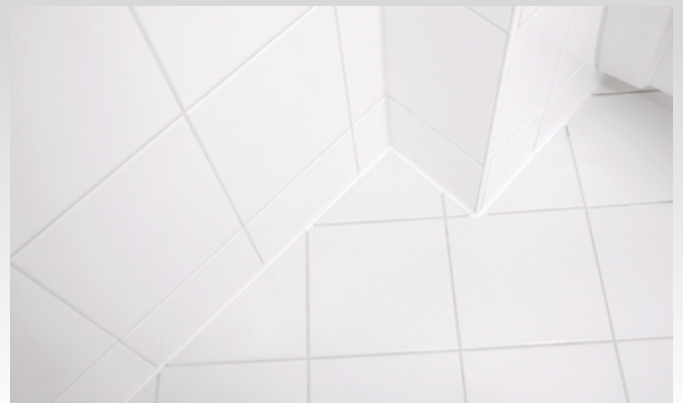

## SOLUTION

### Patented Superoxidation

Arva Greentech has developed the special cleaner Arvox for the basic and maintenance cleaning of joints and surfaces and has tested it extensively in the laboratory and in various environments.

Arvox consists of two components (Arvox A and Arvox B). Their reaction produces oxygen radicals that break down organic pollutants quickly and efficiently. This so-called super-oxidation dissolves the contaminants and removes them through an environmentally neutral chemical reaction.

In contrast to conventional cleaning agents, the dirt is not only dissolved but also decomposed down to the molecular level. The joints are hygienically clean right down to the pores. For very solid dirt, the use of a joint brush is recommended.

*Typical impurities in frequently used baths: Tiles and joints discoloured with care product residues and body fat (left). After treatment with Arvox, joints and surfaces are hygienically clean again.*

## ADVANTAGE

### Fast & powerful

Through the regular use of Arvox

- dirty joints can be cleaned completely and thoroughly;
- there is no need for expensive renewal of the joints;
- tiles and joints are cleaned hygienically;
- renewed soiling is prevented.

### Prices

1 litre bottle (each A or B) **24,90 €**

10 litre canister (each A or B) **229,00 €**

Net prices plus VAT.

The regular use of Arvox results in permanently clean joints, a clean appearance of the tiles and thus longer usage cycles of the rooms.

Professional cleaning of tiles and joints with Arvox opens up a new range of services for use in bathrooms, wellness facilities, commercial kitchens and other tiled areas.

## APPLICATION

### Easy to use

The two liquid components of Arvox Surface are applied simultaneously with a double spray bottle or one after the other with pressure sprayers.

### CUSTOMER BENEFITS

### Great potential

Despite regular maintenance cleaning, dirty joints are often the hygienic and optical weak point in hotel rooms, wellness and fitness facilities, hospitals and care facilities.

The positive effect of clean baths significantly increases the satisfaction of guests and patients. Visible hygiene in detail prevents complaints and negative evaluations.

*Arvox removes detergent residues, body fat and other organic deposits (left) efficiently and pore-deep from joints and tiled surfaces (right).*

### ENHANCED EFFECT

### Efficient mechanics

The i-Scrub® series is a perfect match for Arvox. The hand-held brushing machine cleans joints and tiles effortlessly. The powerful battery lasts at least two hours. Thanks to the brushing speed of 400 rpm, you can reduce the time required by 30% compared to manual cleaning.

With the telescopic rod and the integrated tank, persistent dirt can be removed quickly and efficiently, even on large surfaces.
